SmartForm™

The easy way to create forms in minutes.

At Enthink we believe there are solutions to make your organization's knowledge work for your customers and users. We excel in finding solutions that bridge the complexities of technology with the expectations of the living, breathing person that uses it.

SmartForm is an exciting add-on to the Open Text Web Solutions (RedDot Content Management System). The SmartForm tool allows content editors to design forms, quickly and easily, from ready-made templates or customized fields. Using an intuitive "What You See Is What You Get" (WYSIWYG) interface, users can drag and drop fields to create forms such as: Customer Contact, Information Request, Survey, Feedback and Rating forms. Additional forms can then be developed using your existing styles for a consistent look and feel.
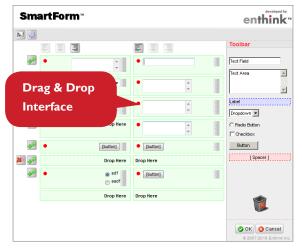

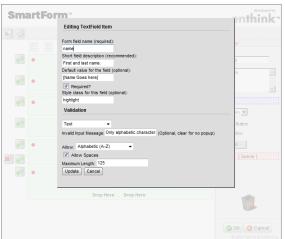

SmartForm innovative features include:

- WYSIWYG interface
- Drag and Drop fields
- Form creation interface
- RedDot security model
- Synchronized element alignment
- Out of the box functionality
- Active work space

SmartForm supports out of the box mail and database handler functionality with no additional development. SmartForm also works with your current handler or any form handling script.
